## Real Time Auto Tuning, User Friendly

Quick and accurate automatic load inertia ratio estimating function

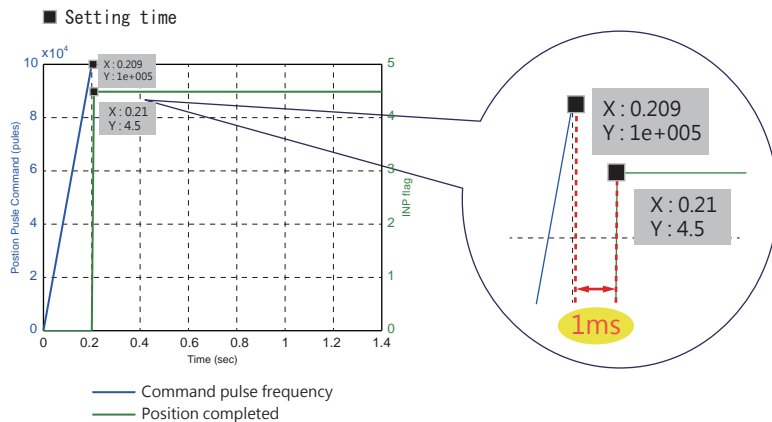

Real time auto tuning can estimate the load inertia ratio fast and accurately. The error of estimated load inertia for both ball screw and belt system is less than 10%, also auto tuning could estimate the load inertia ratio within one cycle (forward + reverse).

## Outstanding Speed Response Performance, 3 times faster

Speed frequency response  
**1.2k Hz**  
 ↑  
 400 Hz

The servo speed frequency response is 1.2k Hz, which is faster than the SDB Series 3 times and help to shorten the setting time reduced to 1ms, with high speed, high response and accurate positioning characteristics.

## High-resolution

High-resolution Encoder

**22 Bit**

4,194,304 pulse/rev

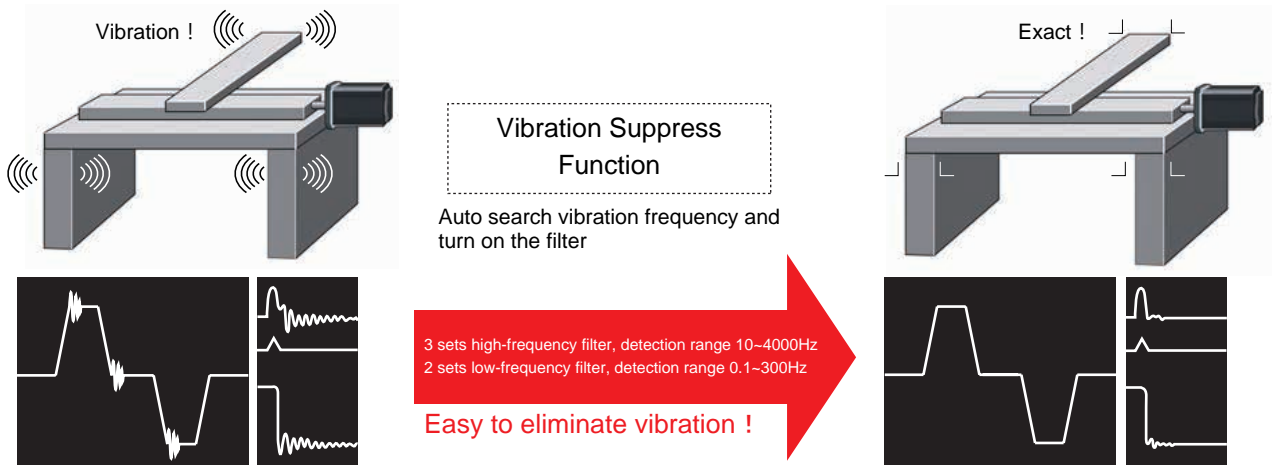

Equipped with Japanese high-level absolute position encoder what resolution is up to 4,194,304 pulse / rev could position more accurately and improve the stableness of low-speed. Japanese encoder provides quality assurance.

# Features

## Reduce Resonance & Vibration

To inertia system of mechanical, both two low-frequency vibration from the end of arm to main body could be suppressed at the same time by vibration control algorithms. Machine performance is utilized to the fullest using the advanced vibration suppression control function.

Automatic high-frequency vibration suppression function could be turned on directly in motion mode and search for the vibration frequency that through machine resonance suppression filter be controlled. Shorten the setting time and improve equipment performance.

## Compact Size

Industry's smallest\*

SDE motor requires 40% less installation space than SMA. (In the case of 400W)

## Cable Leading Direction Optional

The power cable mounting direction of load side or opposite side could be selectable.

## High Speed

High Speed  
**6000 rpm**  
↑  
4500 rpm

Speed increasing and better torque output help to enhance productivity.

## Absolute Position System Optional

Use optional battery to memory absolute position when power-off.  
(Absolute motor and battery is optional)

Battery wiring figure

## Low Inertia Capacity Expansion

Applicable to high frequency and high torque equipment, such as bag making machine, printing machine, feeding machine ... and so on.

Series	Capacity/Resolution	Capacity Range							
		100W	200W	400W	750W	1KW	1.5KW	2KW	3KW
SME	Low inertia (22 bit)					Low inertia up to 3KW			
	Medium inertia (22 bit)								

## Built-in Simple PLC Function (Single-axis Control Mode)

With high flexibility and simple position PLC program, help maker to reduce equipment costs.

Multiple control functions

64 Section program

Position edit mode

± limit setup

35 Types home position return mode

Absolute position mode

<Indexer (turret) Function>

- Provide auto mode, manual onestep, manual continuous and Jog functions.
- Auto search for shortest indexer route.

## Stable Speed and Low Torque Ripple

The torque ripple is under 1.5% help to rotate smoothly during a low-speed operation which is more likely affected by the torque ripple, improving the operation stability.

## Certification

## Powerful Software

Fully support from setup to troubleshooting.

### ● Complete control

**Easy Tuning**  
Auto gain tuning and inertia estimation interface.

### ● Data tracking

**Status Monitoring**  
Display the servo motor current status on time.(ex.load inertia ratio,etc)

### ● Multiple function monitoring

**Oscilloscope Function**  
Oscilloscope long term status capturing function.

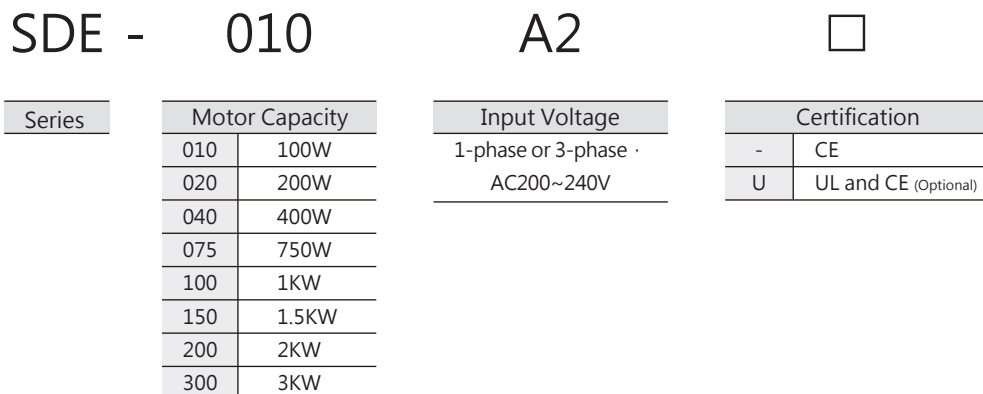

**Detail Display**  
Display various detail reports at the same time and capable of saving those data..

# Connections with Peripheral Equipment

Power Supply : 3-phase 200~240V

## Notes

1. Connect external regeneration unit, please remove P and D short circuit line and connect external resistor to P · C point. Every capacity has its related resistor value, please refer to "Instruction Manual" .
2. Dedicated power cable is necessary with a brake motor, the exclusive power cable for must be prepared and need to input DC24V power. Please don't use drive internal VDD connector for power. Please refer to "Operation Manual" for details.
3. The usage of absolute position, please select the optional battery "SDH-BAT-SET" .
